

Solution Requirements

Date	27 JUNE 2026
Team ID	XXXXXX
Project Name	FinRelief AI – AI Powered Debt Relief & Financial Recovery Platform
Maximum Marks	4 Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should *do*).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should *be*).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Secure login using JWT authentication.	High
2	Authorization levels	Users can manage only their own loans and financial data.	High
3	External interfaces	Google Gemini API for AI-generated negotiation strategies	High

4	Transactions processing	Add, update, delete loans and calculate settlement amounts	High
5	Reporting	Dashboard showing EMI, debt-to-income ratio, financial health, and settlement reports.	Medium
6	Business rules, etc.	Calculate loan priority, financial score, and settlement percentage.	High
7	Compliance to laws or regulations	Secure password hashing and privacy protection.	Medium
8	Other	AI-generated lender negotiation letters.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
------	--------------	-------------------------	-------------------------------------

1	Performance & Speed	Fast response	< 2 seconds
---	---------------------	---------------	-------------

2	Scalability	Support many users	Up to 10,000 users
3	Security & Data Privacy	JWT authentication, password hashing	Secure user data
4	Reliability & Availability	Stable service	99.9% uptime
5	Usability & Accessibility	Easy-to-use interface	Responsive and user-friendly
6	<i>Other</i>	Maintainable code	Modular architecture
