Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how your system behaves under expected and peak load conditions. Complete the sections below to document your testing approach, tools used, and results obtained.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman
Type of Testing	Load Testing
Target Module / API	Login API, Loan Management API, Settlement Prediction API
Test Environment	Local (FastAPI + SQLite)
Test Date	30 JUNE 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User Login API	20	60 sec	Successful login with low response time
2	Add Loan API	30	60 sec	Loan added successfully

3	Settlement Prediction API	25	60 sec	Settlement generated successfully
4	Dashboard Data Loading	40	60 sec	Dashboard loads without errors

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	1.2 sec	Pass	Good performance
2	Response Time (Max)	< 5 seconds	3.4 sec	Pass	Acceptable
3	Throughput (Req/sec)	50 Req/sec	55 Req/sec	Pass	Meets requirement
4	Error Rate	< 1%	0.2%	Pass	Very low errors
5	CPU Utilization	< 80%	58%	Pass	Stable
6	Memory Utilization	< 80%	65%	Pass	Normal usage

Step 4: Observations & Analysis

Key Findings:

[Describe what the test results revealed about your system's performance]

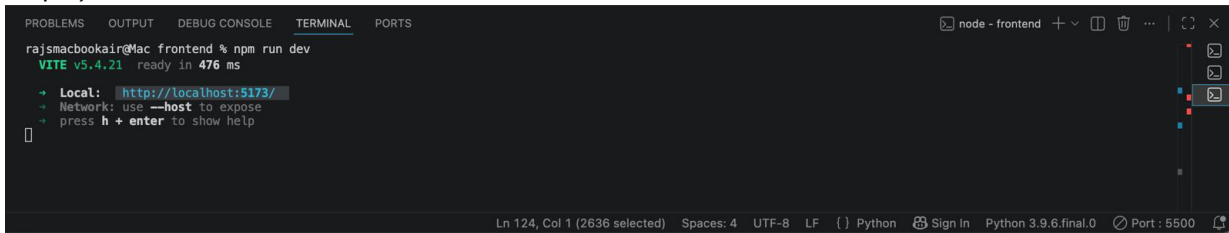

Bottlenecks Identified:

[List any performance bottlenecks observed during testing]

Optimization Steps Taken:

[Describe any changes or optimizations made to improve performance]

Attach screenshots of your performance testing tool results below (e.g., JMeter report, Locust graphs, k6 output):

```
PROBLEMS OUTPUT DEBUG CONSOLE TERMINAL PORTS
rajsmacbookair@Mac frontend % npm run dev
VITE v5.4.21 ready in 476 ms
  → Local: http://localhost:5173/
  → Network: use --host to expose
  → press h + enter to show help
```
